

A Versatile, All-weather Solution for Secure Equipment Protection

In challenging environments, safeguarding your equipment is essential. AEONS outdoor network cabinets provide robust protection with cold-rolled steel construction and IP66/IP55 ratings, shielding your components from water, dust, and debris. With pre-installed adjustable mounting panels and flexible door configurations, these cabinets are ready for immediate use, saving you time and effort. Rest easy knowing your equipment is securely housed in a cabinet designed to meet the highest industry standards.

Advantages

- **Weather Proof** — IP66/IP55 rating ensures protection from water, dust, and debris in harsh environments. .
- **Durable Construction** — Powder finish with textured stove enamel. Built with cold-rolled steel for long-lasting strength and resilience.
- **Multilayer Access** — Double-layer door structure with optional extra panels for multilayer installation, optimizing space utilization. Doors can be opened 180 degrees for easy access and maintenance.
- **Secure Sealing** — Polyurethane gasket provides a tight seal to prevent contaminants from entering.
- **Adjustable Mounting** — Features adjustable panels for versatile equipment installation options.
- **Installation Benefits** — Comes pre-installed and ready for quick deployment. Studs provided to mount the optional panel. Grounding provision on door, body, and panel.

A Universal Platform for Industrial Solutions

Setting up an industrial control system requires a dependable and secure enclosure. Our CC Control Enclosures provide a robust, stable design featuring integrated mounting holes and a three-point lock for enhanced security. With a polyurethane gasket for superior sealing, doors that open up to 130 degrees, and a modular bottom panel for easy cable access, these enclosures ensure both durability and flexibility. Made from SPCC cold-rolled steel with a high-quality finish and compliant with IP55 standards, they offer a reliable solution for mounting and protecting various industrial components."

Advantages

- **Enhanced Security** — Three-point luxury lock and optional side and back panels provide superior protection.
- **Flexible Access** — Door opens up to 130 degrees and can be configured to open left or right.
- **Installation Benefits**— frame structure for quick and flexible configuration with baying options. Studs provided to mount the optional panel. Grounding provision on door, body, and panel
- **Effective Sealing** — Polyurethane gasket offers excellent sealing between the door and frame.
- **Easy Cable Entry** — Three-sectioned bottom panel simplifies cable management and entry.
- **Durable Construction** — Constructed from SPCC cold-rolled steel with a high-quality, powder-coated finish for long-lasting use.

A Reliable Turn-Key Solution for Efficient Deployment

Maximizing limited space is crucial when installing ICT equipment in challenging environments. AEONS outdoor network cabinets are designed to address this need, offering a rugged, IP55-rated construction with pre-installed 120VAC fans and ventilation systems to prevent overheating. Built with 14-gauge cold-rolled steel, these cabinets are ready for rapid deployment, whether wall-mounted or floor-standing. Save time and effort with easy installation, secure cable management, and confidence that your equipment is protected and organized from day one.

Advantages

- **Space Efficiency** — Optimized for secure storage in limited spaces with wall or floor mounting.
- **Durable Protection** — Powder coated heavy-duty steel construction with secure latches and built-in ventilation.
- **Weather Canopy** — Projection on all sides; Fan for active climate control.
- **Cable Organization** — Neat cable pass-throughs for efficient management.
- **Pole Mounting** — Supports both wall and pole mounting, offering flexibility in installation.
- **Installation Benefits** — Arrives fully assembled with all necessary hard-
